OpenStack CI in Numbers

- ▶ ~1800 contributors to Pike
- ▶ 6 Clouds + 2 run by OpenStack Infra
- ▶ 1600+ repos in openstack(|-dev|-infra)
- ▶ 20k lines Zuul configuration

Source: Zuul, Graphite

OpenStack QA Mission Statement

"Develop, maintain, and initiate tools and plans to ensure the upstream stability and quality of OpenStack, and its release readiness at any point during the release cycle."

Testing OpenStack

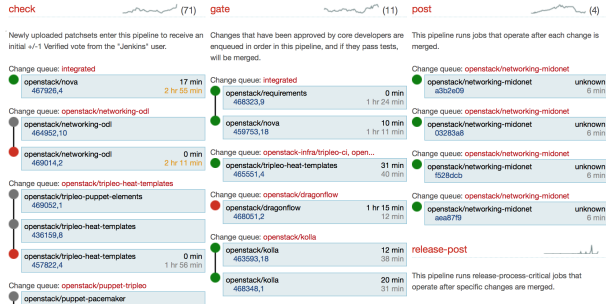

Status **Zuul** Rechecks Reviews Bugday OpenStack-Health

Zuul Status

Zuul is a pipeline oriented project gating and automation system. Each of the sections below is a separate pipeline configured to automate some portion of the testing or operation of the OpenStack project. For more information, please see the [Zuul reference manual](#).

Queue lengths: 0 events, 0 results. Filters: Expand by default: ☐

- Release ready master
- Check & Gate Pipelines
- Ephemeral test system

Source: <http://status.openstack.org/zuul>

Beyond the gate

- Periodic tests
- Release jobs

periodic jobs

Source: status.openstack.org/openstack-health/

The unbalanced scale

- ▶ Core reviewers
- ▶ Horizontal teams
- ▶ Running CI

- ▶ Commits
- ▶ # of Tests
- ▶ # of Configurations

Not the scale I meant...

My day in reviews

- Change in devstack:

```
536      +      if [ -z "$VRIT_DRIVER" ]; then
537      +          # If there is not virt driver defined we assume nova is not installed
538      +          iniset $STEMPEST_CONFIG service_available nova "False"
539      +      fi
540      +
```

Source: <https://review.openstack.org/468060>

- CI reports all green
- Can you see the error?

Keep the gate flowing

- ▶ Beginning of Pike:
- ▶ Number of services
- ▶ Service memory footprint
- ▶ Test load
- ▶ Libvirt instability under load
- ▶ Tempest bug in ssh test code
- ▶ Vanilla database configuration

Source: Zuul, Graphite

Data!

- ▶ 50MB compressed logs for integration test run
 - ▶ node setup
 - ▶ system, service and test log files
 - ▶ system, service and test configuration
 - ▶ system metrics (dstat data)
 - ▶ libvirt logs
- ▶ Test result data (Zuul & subunit)
- ▶ Gerrit event streams

Single run view

- ▶ Deeplink into logs
- ▶ HTML view of tests
- ▶ Stackviz
- ▶ Ansible Run Analysis

Source: [Stackviz](#)

Runtime variance

Deeper into data

- ▶ Logstash: logstash.openstack.org
- ▶ Elastic Recheck: <http://status.openstack.org/elastic-recheck/>
- ▶ E-R Queries: git.openstack.org/openstack-infra/elastic-recheck/queries

Deeper into data

- ▶ subunit2sql <mysql://logstash.openstack.org/subunit2sql>
- ▶ subunit2sql-graph
- ▶ OpenStack-Health API health.openstack.org/
- ▶ OpenStack Health <http://status.openstack.org/openstack-health/>

Other Data Sources

- ▶ Graphite: <http://graphite.openstack.org>
- ▶ Grafana: <http://grafana.openstack.org>
- ▶ Firehose: <https://docs.openstack.org/infra/system-config/firehose.html>

What's next?

- ▶ Metrics over time from OS, MySQL, RabbitMQ, etc
- ▶ CRM114
- ▶ Artificial intelligence

Playing with Machine Learning

- ▶ Long Short Term Memory network, RNN
- ▶ Trained with nova logs from periodic test runs
- ▶ DEMO

AI to the rescue

- ▶ Make anomalous log lines emerge
- ▶ Help identify new elastick recheck signatures
- ▶ Catch changes in behaviour that we do not test for
- ▶ Help review process
